Product Change Notification - SYST-03NAPO573

Date:

06 Mar 2020

Product Category:

Linear Comparators

Affected CPNs:

Notification subject:

Data Sheet - MCP6566/7/9 Data Sheet

Notification text:

SYST-03NAPO573

Microchip has released a new Product Documents for the MCP6566/7/9 Data Sheet of devices. If you are using one of these devices please read the document located at MCP6566/7/9 Data Sheet.

Notification Status: Final

Description of Change:

The following is the list of modifications:
1. Updated package drawings for the 5-Lead SC70 and 14-lead TSSOP packages in Section 6.0 “Packaging Information”.

Impacts to Data Sheet: None

Reason for Change: To Improve Manufacturability

Change Implementation Status: Complete

Date Document Changes Effective: 06 Mar 2020

NOTE: Please be advised that this is a change to the document only the product has not been changed.

Markings to Distinguish Revised from Unrevised Devices: N/A

Attachment(s):

MCP6566/7/9 Data Sheet

Please contact your local Microchip sales office with questions or concerns regarding this notification.

Terms and Conditions:

If you wish to receive Microchip PCNs via email please register for our PCN email service at our PCN home page select register then fill in the required fields. You will find instructions about registering for Microchips PCN email service in the PCN FAQ section.
If you wish to change your PCN profile, including opt out, please go to the PCN home page select login and sign into your myMicrochip account. Select a profile option from the left navigation bar and make the applicable selections.

MCP6566/6R/6U/7/9

1.8V Low-Power Open-Drain Output Comparator

Features

- Propagation Delay at 1.8 V_{DD}:
  - 56 ns (typical) high-to-low
- Low Quiescent Current: 100 µA (typical)
- Input Offset Voltage: ±3 mV (typical)
- Rail-to-Rail Input: V_{SS} – 0.3V to V_{DD} + 0.3V
- Open-Drain Output
- Wide Supply Voltage Range: 1.8V to 5.5V
- Available in Single, Dual and Quad
- Packages: SC70, SOT-23, SOIC, MSOP, TSSOP

Typical Applications

- Laptop Computers
- Mobile Phones
- Handheld Electronics
- RC Timers
- Alarm and Monitoring Circuits
- Window Comparators
- Multivibrators

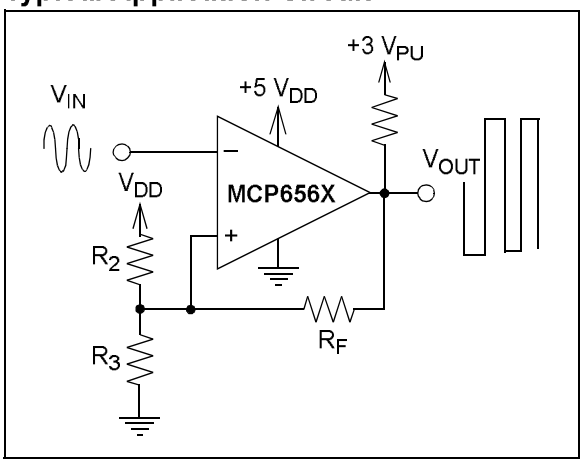
Design Aids

- Microchip Advanced Part Selector (MAPS)
- Analog Demonstration and Evaluation Boards
- Application Notes
- SPICE Macro Model

Related Device

- Push-Pull Output: MCP6561/1R/1U/2/4

Typical Application Circuit



Description

The Microchip MCP6566/6R/6U/7/9 family of open-drain output comparators is offered in single, dual and quad configurations.

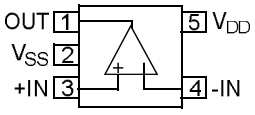
These comparators are optimized for low-power 1.8V, single-supply applications with greater than rail-to-rail input operation. The internal input hysteresis eliminates output switching due to internal input noise voltage, reducing current draw.

The open-drain output of the MCP6566/6R/6U/7/9 family requires a pull-up resistor. It supports pull-up voltages that are above and below V_{DD}, which can be used to level shift. The output toggle frequency can reach a typical 4 MHz (typical) while limiting supply current surges and dynamic power consumption during switching.

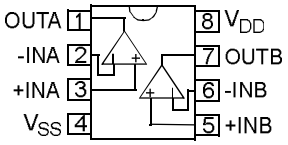
This family operates with a single-supply voltage of 1.8V to 5.5V while drawing less than 100 µA/comparator of quiescent current (typical).

Package Types

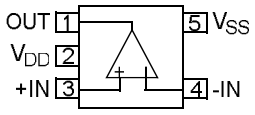
MCP6566
5-Lead SOT-23, SC70



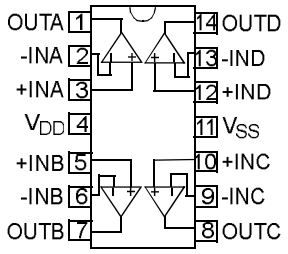
MCP6567
8-Lead SOIC, MSOP



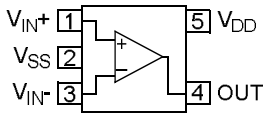
MCP6566R
5-Lead SOT-23



MCP6569
14-Lead SOIC, TSSOP



MCP6566U
5-Lead SOT-23



1.0 ELECTRICAL CHARACTERISTICS

1.1 Absolute Maximum Ratings†

$V_{DD} - V_{SS}$ 6.5V
Open-Drain Output..... V_{SS} + 10.5V
All Other Inputs and Outputs..... V_{SS} – 0.3V to V_{DD} + 0.3V
Analog Input (V_{IN})†† ..... V_{SS} – 1.0V to V_{DD} + 1.0V
Difference Input voltage ..... $|V_{DD} - V_{SS}|$
Output Short-Circuit Current .....±25 mA
Current at Input Pins .....±2 mA
Current at Output and Supply Pins .....±50 mA
Storage Temperature .....-65°C to +150°C
Ambient Temperature with Power Applied.....-40°C to +125°C
Junction Temperature .....+150°C
ESD Protection on All Pins (HBM/MM) ..... ≥ 4 kV/300V

† **Notice:** Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

†† See **Section 4.1.2 "Input Voltage and Current Limits"**.

DC CHARACTERISTICS

Electrical Characteristics: Unless otherwise indicated: V_{DD} = +1.8V to +5.5V, V_{SS} = GND, T_A = +25°C, $V_{IN}+ = V_{DD}/2$, $V_{IN}- = V_{SS}$ and R_{PULL_UP} = 20 kΩ to $V_{PU} = V_{DD}$ (see Figure 1-1).

Parameters	Symbol	Min	Typ	Max	Units	Conditions
Power Supply						
Supply Voltage	V_{DD}	1.8	—	5.5	V	
Quiescent Current per Comparator	I_Q	60	100	130	µA	I_{OUT} = 0
Power Supply Rejection Ratio	PSRR	63	70	—	dB	$V_{CM} = V_{SS}$
Input						
Input Offset Voltage	V_{OS}	-10	±3	+10	mV	$V_{CM} = V_{SS}$ **(Note 1)**
Input Offset Drift	$\Delta V_{OS}/\Delta T$	—	±2	—	µV/°C	$V_{CM} = V_{SS}$
Input Offset Current	I_{OS}	—	±1	—	pA	$V_{CM} = V_{SS}$
Input Bias Current	I_B	—	1	—	pA	T_A = +25°C, $V_{IN}- = V_{DD}/2$
		—	60	—	pA	T_A = +85°C, $V_{IN}- = V_{DD}/2$
		—	1500	5000	pA	T_A = +125°C, $V_{IN}- = V_{DD}/2$
Input Hysteresis Voltage	V_{HYST}	1.0	—	5.0	mV	$V_{CM} = V_{SS}$ **(Notes 1, 2)**
Input Hysteresis Linear Temp. Co.	TC_1	—	10	—	µV/°C	
Input Hysteresis Quadratic Temp. Co.	TC_2	—	0.3	—	µV/°C^2	
Common-Mode Input Voltage Range	V_{CMR}	V_{SS} – 0.2	—	V_{DD} + 0.2	V	V_{DD} = 1.8V
		V_{SS} – 0.3	—	V_{DD} + 0.3	V	V_{DD} = 5.5V
Common-Mode Rejection Ratio	CMRR	54	66	—	dB	V_{CM} = -0.3V to V_{DD} + 0.3V, V_{DD} = 5.5V
		50	63	—	dB	$V_{CM} = V_{DD}/2$ to V_{DD} + 0.3V, V_{DD} = 5.5V
		54	65	—	dB	V_{CM} = -0.3V to $V_{DD}/2$, V_{DD} = 5.5V
Common-Mode Input Impedance	Z_{CM}	—	10^{13}||4	—	Ω||pF	
Differential Input Impedance	Z_{DIFF}	—	10^{13}||2	—	Ω||pF	

Note 1: The input offset voltage is the center of the input referred trip points. The input hysteresis is the difference between the input referred trip points.

2: V_{HYST} at different temperatures is estimated using V_{HYST} (T_A) = V_{HYST} @ +25°C + (T_A – 25°C) TC_1 + (T_A – 25°C)^2 TC_2.

3: Limit the output current to an absolute maximum rating of 50 mA.

4: The pull-up voltage for the open-drain output V_{PULL_UP} can be as high as the absolute maximum rating of 10.5V. In this case, I_{OH_leak} can be higher than 1 µA (see Figure 2-30).

DC CHARACTERISTICS (CONTINUED)

Electrical Characteristics: Unless otherwise indicated: V_{DD} = +1.8V to +5.5V, V_{SS} = GND, T_A = +25°C, $V_{IN}+$ = $V_{DD}/2$, $V_{IN}-$ = V_{SS} and R_{PULL_UP} = 20 kΩ to V_{PU} = V_{DD} (see Figure 1-1).

Parameters	Symbol	Min	Typ	Max	Units	Conditions
Push-Pull Output						
Pull-up Voltage	V_{PULL_UP}	1.6	—	5.5	V	
High-Level Output Voltage	V_{OH}	—	—	V_{PULL_UP}	V	See Figure 1-1 **(Notes 3, 4)**
High-Level Output Current Leakage	I_{OH_leak}	—	—	1	µA	**Note 4**
Low-Level Output Voltage	V_{OL}	—	—	0.6	V	I_{OUT} = 3 mA/8 mA @ V_{DD} = 1.8V/5.5V
Short-Circuit Current **(Note 3)**	I_{SC}	—	±30	—	mA	Not to exceed absolute max. rating
Output Pin Capacitance	C_{OUT}	—	8	—	pF	

Note 1: The input offset voltage is the center of the input referred trip points. The input hysteresis is the difference between the input referred trip points.

2: V_{HYST} at different temperatures is estimated using V_{HYST} (T_A) = V_{HYST} @ +25°C + (T_A – 25°C) TC_1 + (T_A – 25°C)^2 TC_2.

3: Limit the output current to an absolute maximum rating of 50 mA.

4: The pull-up voltage for the open-drain output V_{PULL_UP} can be as high as the absolute maximum rating of 10.5V. In this case, I_{OH_leak} can be higher than 1 µA (see Figure 2-30).

AC CHARACTERISTICS

Electrical Characteristics: Unless otherwise indicated: V_{DD} = +1.8V to +5.5V, V_{SS} = GND, T_A = +25°C, $V_{IN}+$ = $V_{DD}/2$, $V_{IN}-$ = V_{SS}, R_{PULL_UP} = 20 kΩ to V_{PU} = V_{DD} and C_L = 25 pF (see Figure 1-1).

Parameters	Symbol	Min	Typ	Max	Units	Conditions
Propagation Delay						
High-to-Low,100 mV Overdrive	t_{PHL}	—	56	80	ns	V_{CM} = $V_{DD}/2$, V_{DD} = 1.8V **(Note 2)**
		—	34	80	ns	V_{CM} = $V_{DD}/2$, V_{DD} = 5.5V
Output						
Fall Time	t_F	—	20	—	ns	
Maximum Toggle Frequency	f_{TG}	—	4	—	MHz	V_{DD} = 5.5V
		—	2	—	MHz	V_{DD} = 1.8V
Input Voltage Noise	E_{NI}	—	350	—	μV_{P-P}	10 Hz to 10 MHz **(Note 1)**

Note 1: ENI is based on SPICE simulation.

2: Rise time, t_R and t_{PLH}, depend on the load (R_L and C_L). These specifications are valid for the specified load only.

TEMPERATURE SPECIFICATIONS

Electrical Characteristics: Unless otherwise indicated: V_{DD} = +1.8V to +5.5V and V_{SS} = GND.

Parameters	Symbol	Min	Typ	Max	Units	Conditions
Temperature Ranges						
Specified Temperature Range	T_A	-40	—	+125	°C	
Operating Temperature Range	T_A	-40	—	+125	°C	
Storage Temperature Range	T_A	-65	—	+150	°C	
Thermal Package Resistances						
Thermal Resistance, 5-Lead SC70	θ_{JA}	—	331	—	°C/W	
Thermal Resistance, 5-Lead SOT-23	θ_{JA}	—	201	—	°C/W	
Thermal Resistance, 8-Lead MSOP	θ_{JA}	—	211	—	°C/W	
Thermal Resistance, 8-Lead SOIC	θ_{JA}	—	149	—	°C/W	
Thermal Resistance, 14-Lead SOIC	θ_{JA}	—	91	—	°C/W	
Thermal Resistance, 14-Lead TSSOP	θ_{JA}	—	100	—	°C/W	

1.2 Test Circuit Configuration

This test circuit configuration is used to determine the AC and DC specifications.

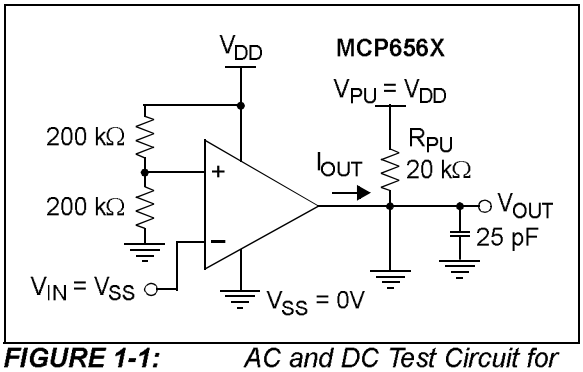


FIGURE 1-1: *AC and DC Test Circuit for the Open-Drain Output Comparators.*

2.0 TYPICAL PERFORMANCE CURVES

Note: The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

Note: Unless otherwise indicated, V_{DD} = +1.8V to +5.5V, V_{SS} = GND, T_A = +25°C, $V_{IN}+ = V_{DD}/2$, $V_{IN}-$ = GND, R_L = 20 kΩ to $V_{PU} = V_{DD}$ and C_L = 25 pF.

3.0 PIN DESCRIPTIONS

Descriptions of the pins are listed in Table 3-1.

TABLE 3-1: PIN FUNCTION TABLE

MCP6566	MCP6566R	MCP6566U	MCP6567	MCP6569	Symbol	Description
SC70, SOT-23	SOT-23	SOT-23	MSOP, SOIC	SOIC, TSSOP		
1	1	4	1	1	OUT, OUTA	Digital Output (Comparator A)
4	4	3	2	2	V_{IN}^-, V_{INA}^-	Inverting Input (Comparator A)
3	3	1	3	3	V_{IN}^+, V_{INA}^+	Noninverting Input (Comparator A)
5	2	5	8	4	V_{DD}	Positive Power Supply
—	—	—	5	5	V_{INB}^+	Noninverting Input (Comparator B)
—	—	—	6	6	V_{INB}^-	Inverting Input (Comparator B)
—	—	—	7	7	OUTB	Digital Output (Comparator B)
—	—	—	—	8	OUTC	Digital Output (Comparator C)
—	—	—	—	9	V_{INC}^-	Inverting Input (Comparator C)
—	—	—	—	10	V_{INC}^+	Noninverting Input (Comparator C)
2	5	2	4	11	V_{SS}	Negative Power Supply
—	—	—	—	12	V_{IND}^+	Noninverting Input (Comparator D)
—	—	—	—	13	V_{IND}^-	Inverting Input (Comparator D)
—	—	—	—	14	OUTD	Digital Output (Comparator D)

3.1 Analog Inputs

The comparator noninverting and inverting inputs are high-impedance CMOS inputs with low bias currents.

3.2 Digital Outputs

The comparator outputs are CMOS, open-drain digital outputs. They are designed to make level shifting and wired-OR easy to implement.

3.3 Power Supply (V_{SS} and V_{DD})

The positive power supply pin (V_{DD}) is 1.8V to 5.5V higher than the negative power supply pin (V_{SS}). For normal operation, the other pins are at voltages between V_{SS} and V_{DD}.

Typically, these parts are used in a single (positive) supply configuration. In this case, V_{SS} is connected to ground and V_{DD} is connected to the supply. V_{DD} will need a local bypass capacitor (typically 0.01 µF to 0.1 µF) within 2 mm of the V_{DD} pin. These pins can share a bulk capacitor with nearby analog parts (within 100 mm), but it is not required.

4.0 APPLICATION INFORMATION

The MCP6566/6R/6U/7/9 family of open-drain output comparators is fabricated on Microchip's state-of-the-art CMOS process. They are suitable for a wide range of high-speed applications requiring low-power consumption.

4.1 Comparator Inputs

4.1.1 NORMAL OPERATION

The input stage of this family of devices uses two different input stages in parallel. This configuration provides three regions of operation; one operates at low input voltages, one at high input voltages, and one at mid input voltage. With this topology, the input voltage range is 0.3V above V_{DD} and 0.3V below V_{SS}, while providing low offset voltage throughout the Common-mode range. The input offset voltage is measured at both V_{SS} – 0.3V and V_{DD} + 0.3V to ensure proper operation.

The MCP6566/6R/6U/7/9 family has an internally set hysteresis, V_{HYST}, which is small enough to maintain input offset accuracy and large enough to eliminate output chattering caused by the comparator's own input noise voltage, E_{NI}. Figure 4-1 depicts this behavior. Input offset voltage (V_{OS}) is the center (average) of the (input referred) low-high and high-low trip points. Input hysteresis voltage (V_{HYST}) is the difference between the same trip points.

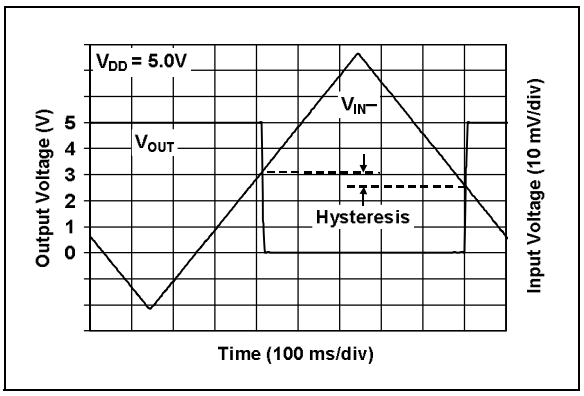

FIGURE 4-1: *The MCP6566/6R/6U/7/9 Comparators' Internal Hysteresis Eliminates Output Chatter Caused by Input Noise Voltage.*

4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

The ESD protection on the inputs can be depicted as shown in Figure 4-2. This structure was chosen to protect the input transistors and to minimize input bias current (I_B). The input ESD diodes clamp the inputs when they try to go more than one diode drop below V_{SS}. They also clamp any voltages that go too far above V_{DD}. The diodes' breakdown voltage is high enough to allow normal operation, but low enough to bypass ESD events within the specified limits.

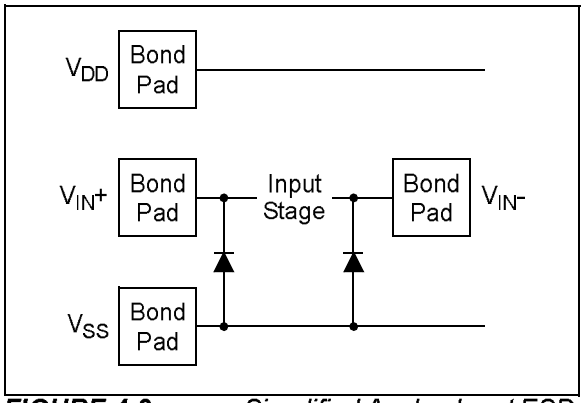

FIGURE 4-2: *Simplified Analog Input ESD Structures.*

In order to prevent damage and/or improper operation of these amplifiers, the circuits they are in must limit the currents (and voltages) at the V_{IN}+ and V_{IN}- pins (see **Section 1.1 "Absolute Maximum Ratings†"** at the beginning of **Section 1.0 "Electrical Characteristics"**). Figure 4-3 shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins (V_{IN}+ and V_{IN}-) from going too far below ground, and the resistors, R_1 and R_2, limit the possible current drawn out of the input pin. Diodes, D_1 and D_2, prevent the input pin (V_{IN}+ and V_{IN}-) from going too far above V_{DD}. When implemented as shown, resistors, R_1 and R_2, also limit the current through D_1 and D_2.

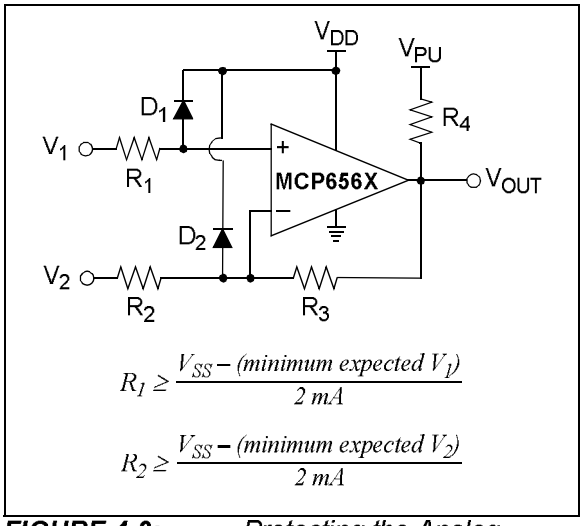

FIGURE 4-3: *Protecting the Analog Inputs.*

It is also possible to connect the diodes to the left of the resistors, R_1 and R_2. In this case, the currents through the diodes, D_1 and D_2, need to be limited by some other mechanism. The resistor then serves as an inrush current limiter; the DC current into the input pins (V_{IN}+ and V_{IN}-) should be very small.

A significant amount of current can flow out of the inputs when the Common-mode voltage (V_{CM}) is below ground (V_{SS}); see Figure 4-3. Applications that are high-impedance may need to limit the usable voltage range.

4.1.3 PHASE REVERSAL

The MCP6566/6R/6U/7/9 comparator family uses CMOS transistors at the input. They are designed to prevent phase inversion when the input pins exceed the supply voltages. Figure 2-3 shows an input voltage exceeding both supplies with no resulting phase inversion.

4.2 Open-Drain Output

The open-drain output is designed to make level shifting and wired-OR logic easy to implement. The output stage minimizes switching current (shoot-through current from supply-to-supply) when the output changes state. See Figures 2-15, 2-18, 2-35 and 2-36 for more information.

4.3 Externally Set Hysteresis

Greater flexibility in selecting hysteresis (or input trip points) is achieved by using external resistors. Hysteresis reduces output chattering when one input is slowly moving past the other. It also helps in systems in which it is best not to cycle between high and low states too frequently (e.g., air conditioner thermostatic control). Output chatter also increases the dynamic supply current.

4.3.1 NONINVERTING CIRCUIT

Figure 4-4 shows a noninverting circuit for single-supply applications using just two resistors. The resulting hysteresis diagram is shown in Figure 4-5.

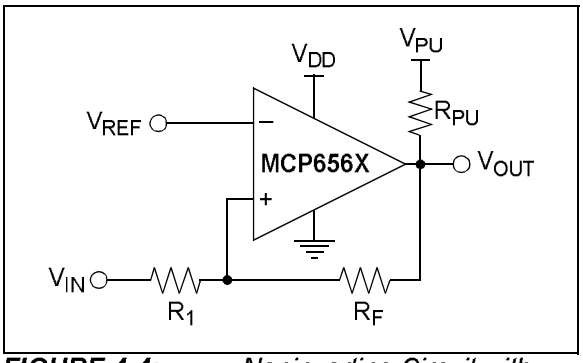

FIGURE 4-4: *Noninverting Circuit with Hysteresis for Single Supply.*

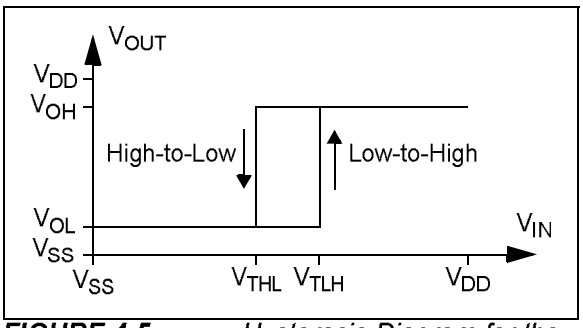

FIGURE 4-5: *Hysteresis Diagram for the Noninverting Circuit.*

The trip points for Figures 4-4 and 4-5 are:

EQUATION 4-1:

$$V_{TLH} = V_{REF}\left(1 + \frac{R_1}{R_F}\right) - V_{OL}\left(\frac{R_1}{R_F}\right)$$

$$V_{THL} = V_{REF}\left(1 + \frac{R_1}{R_F}\right) - V_{OH}\left(\frac{R_1}{R_F}\right)$$

Where:

V_{TLH} = Trip Voltage from Low-to-High

V_{THL} = Trip Voltage from High-to-Low

4.3.2 INVERTING CIRCUIT

Figure 4-6 shows an inverting circuit for single supply using three resistors. The resulting hysteresis diagram is shown in Figure 4-7.

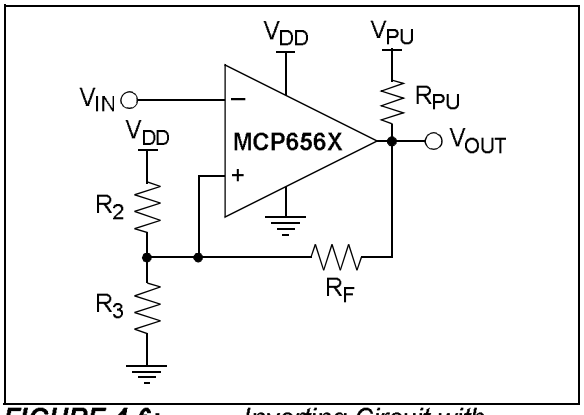

FIGURE 4-6: *Inverting Circuit with Hysteresis.*

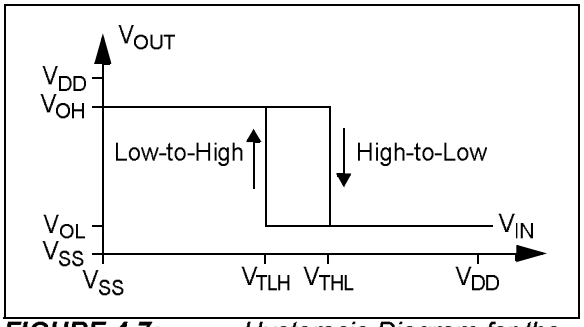

FIGURE 4-7: *Hysteresis Diagram for the Inverting Circuit.*

In order to determine the trip voltages (V_{THL} and V_{TLH}) for the circuit shown in Figure 4-6, R_2 and R_3 can be simplified to the Thevenin equivalent circuit with respect to V_{DD}, as shown in Figure 4-8.

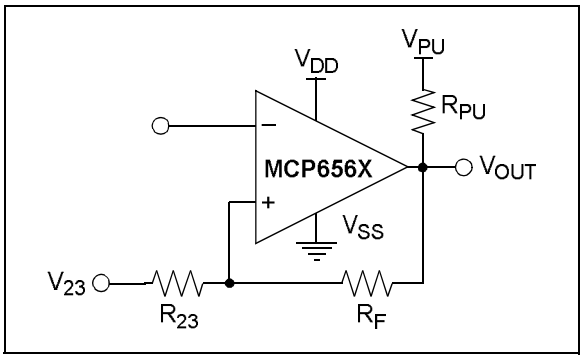

FIGURE 4-8: *Thevenin Equivalent Circuit.*

Where:

$$R_{23} = \frac{R_2 R_3}{R_2 + R_3}$$

$$V_{23} = \frac{R_3}{R_2 + R_3} \times V_{DD}$$

Using this simplified circuit, the trip voltage can be calculated using the following equation:

EQUATION 4-2:

$$V_{THL} = V_{OH}\left(\frac{R_{23}}{R_{23} + R_F}\right) + V_{23}\left(\frac{R_F}{R_{23} + R_F}\right)$$

$$V_{TLH} = V_{OL}\left(\frac{R_{23}}{R_{23} + R_F}\right) + V_{23}\left(\frac{R_F}{R_{23} + R_F}\right)$$

Where:

V_{TLH} = Trip Voltage from Low-to-High

V_{THL} = Trip Voltage from High-to-Low

Figure 2-21 and Figure 2-24 can be used to determine typical values for V_{OH} and V_{OL}.

4.4 Bypass Capacitors

With this family of comparators, the power supply pin (V_{DD} for single supply) should have a local bypass capacitor (i.e., 0.01 µF to 0.1 µF) within 2 mm for good edge rate performance.

4.5 Capacitive Loads

Reasonable capacitive loads (e.g., logic gates) have little impact on propagation delay (see Figure 2-32). The supply current increases with increasing toggle frequency (Figure 2-20), especially with higher capacitive loads. The output slew rate and propagation delay performance will be reduced with higher capacitive loads.

4.6 PCB Surface Leakage

In applications where low input bias current is critical, PCB (Printed Circuit Board) surface leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is $10^{12}\Omega$. A 5V difference would cause 5 pA of current to flow. This is greater than the MCP6566/6R/6U/7/9 family's bias current at +25°C (1 pA, typical).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. An example of this type of layout is shown in Figure 4-9.

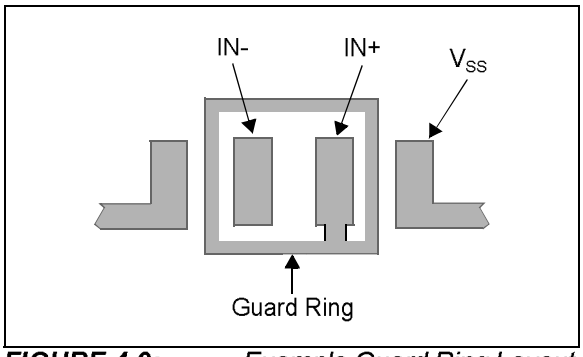

FIGURE 4-9: *Example Guard Ring Layout for Inverting Circuit.*

1. Inverting Configuration (Figures 4-6 and 4-9):
   a) Connect the guard ring to the noninverting input pin (V_{IN}+). This biases the guard ring to the same reference voltage as the comparator (e.g., $V_{DD}/2$ or ground).
   b) Connect the inverting pin (V_{IN}-) to the input pad without touching the guard ring.
2. Noninverting Configuration (Figure 4-4):
   a) Connect the noninverting pin (V_{IN}+) to the input pad without touching the guard ring.
   b) Connect the guard ring to the inverting input pin (V_{IN}-).

4.7 PCB Layout Technique

When designing the PCB layout, it is critical to note that analog and digital signal traces are adequately separated to prevent signal coupling. If the comparator output trace is at close proximity to the input traces, then large output voltage changes, from V_{SS} to V_{DD} or visa versa, may couple to the inputs and cause the device output to oscillate. To prevent such oscillation, the output traces must be routed away from the input pins. The SC70 and SOT-23 are relatively immune because the output pin OUT (Pin 1) is separated by the power pin V_{DD}/V_{SS} (Pin 2) from the input pin +IN (as long as the analog and digital traces remain separated throughout the PCB). However, the pinouts for the dual and quad packages (SOIC, MSOP, TSSOP) have OUT and -IN pins (Pins 1 and 2) close to each other. The recommended layout for these packages is shown in Figure 4-10.

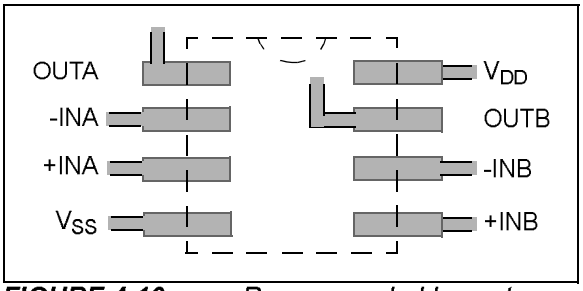

FIGURE 4-10: *Recommended Layout.*

4.8 Unused Comparators

An unused amplifier in a quad package (MCP6569) should be configured as shown in Figure 4-11. This circuit prevents the output from toggling and causing crosstalk. It uses the minimum number of components and draws minimal current (see Figure 2-14 and Figure 2-15).

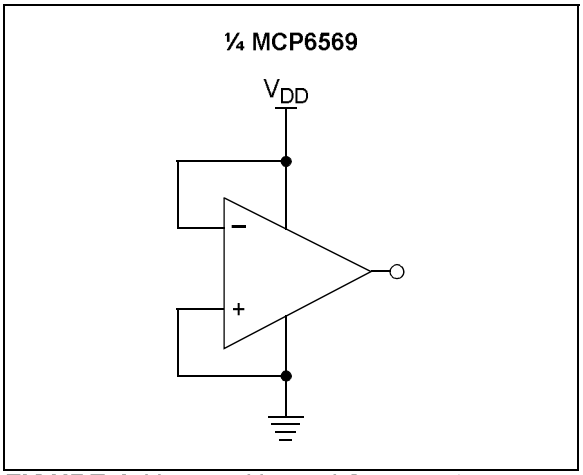

FIGURE 4-11: *Unused Comparators.*

4.9 Typical Applications

4.9.1 PRECISE COMPARATOR

Some applications require higher DC precision. An easy way to solve this problem is to use an amplifier (such as the MCP6291) to gain-up the input signal before it reaches the comparator. Figure 4-12 shows an example of this approach.

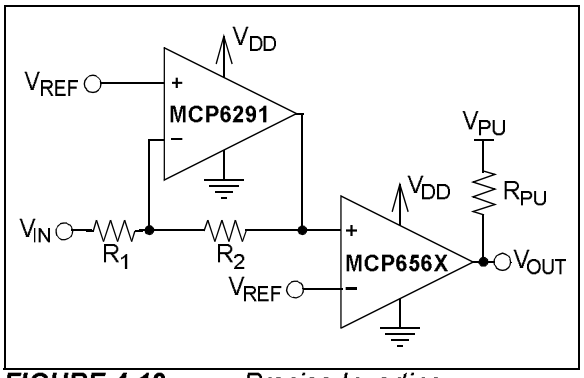

FIGURE 4-12: *Precise Inverting Comparator.*

4.9.2 WINDOWED COMPARATOR

Figure 4-13 shows one approach to designing a windowed comparator. The AND gate produces a logic '1' when the input voltage is between V_{RB} and V_{RT} (where $V_{RT} > V_{RB}$).

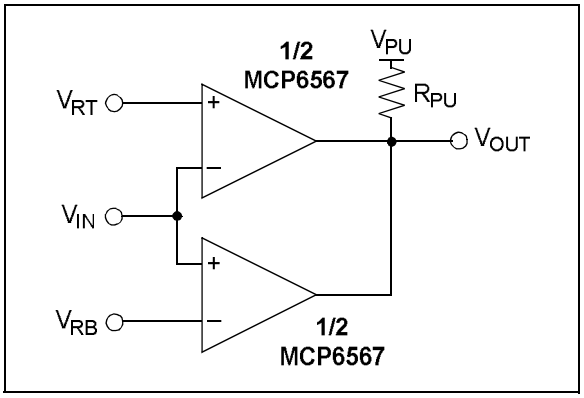

FIGURE 4-13: *Windowed Comparator.*

4.9.3 BISTABLE MULTIVIBRATOR

A simple bistable multivibrator design is shown in Figure 4-14. V_{REF} needs to be between the power supplies (V_{SS} = GND and V_{DD}) to achieve oscillation. The output duty cycle changes with V_{REF}.

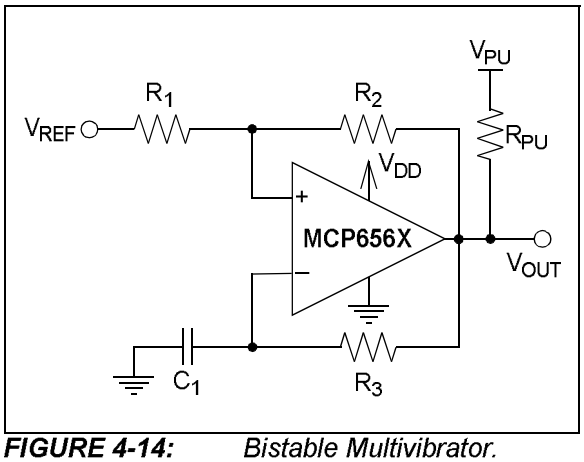

FIGURE 4-14: *Bistable Multivibrator.*

NOTES:

5.0 DESIGN AIDS

5.1 Microchip Advanced Part Selector (MAPS)

MAPS is a software tool that helps semiconductor professionals efficiently identify Microchip devices that fit a particular design requirement.

Available at no cost from the Microchip website at www.microchip.com/maps, the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool you can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for data sheets, purchase and sampling of Microchip parts.

5.2 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of Analog Demonstration and Evaluation Boards that are designed to help you achieve faster time to market.

For a listing of these boards, and their corresponding user's guides and technical information, visit the Microchip website at www.microchip.com/analogtools. Three of our boards that are especially useful are:

- 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board, P/N SOIC8EV
- 14-Pin SOIC/TSSOP/DIP Evaluation Board, P/N SOIC14EV
- 5/6-Pin SOT23 Evaluation Board, P/N VSUPEV2

5.3 Application Notes

The following Microchip Application Note is available on the Microchip website at www.microchip.com and is recommended as a supplemental reference resource:

- AN895 – *"Oscillator Circuits For RTD Temperature Sensors"* (DS00895).

5.4 SPICE Macro Model

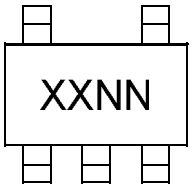
The latest SPICE macro model for the MCP6566/7/9 op amp is available on the Microchip website at www.microchip.com. The model was written and tested in the official Cadence® (OrCAD™) PSpice®. For the other simulators, translation may be required.

The model covers a wide aspect of the comparator's electrical specifications. Not only does the model cover voltage, current and resistance of the comparator, but it also covers the temperature and noise effects on the behavior of the comparator. The model has not been verified outside of the specification range listed in the comparator data sheet. The model behaviors under these conditions cannot ensure it will match the actual comparator performance. Moreover, the model is intended to be an initial design tool. Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

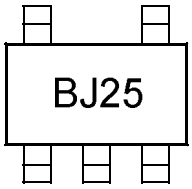
6.0 PACKAGING INFORMATION

6.1 Package Marking Information

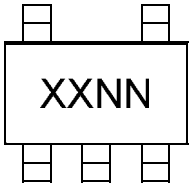
5-Lead SC70 **(MCP6566)**



Example:



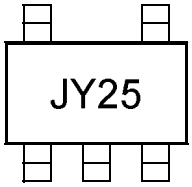
5-Lead SOT-23 **(MCP6566, MCP6566R)**



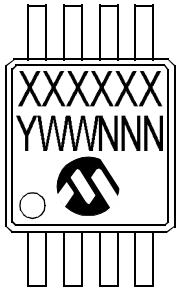
Device	Code
MCP6566T	JYNN
MCP6566RT	JZNN
MCP6566UT	WLNN

Note: Applies to 5-Lead SOT-23.

Example:

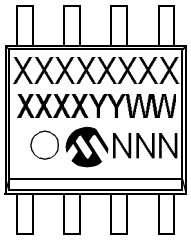


8-Lead MSOP **(MCP6567)**

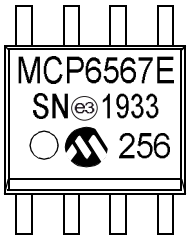


Example:

8-Lead SOIC (150 mil) **(MCP6567)**



Example:

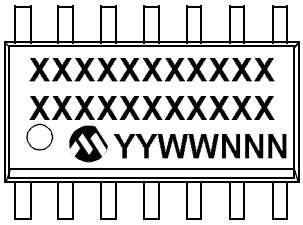


Legend:	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
	(e3)	Pb-free JEDEC designator for Matte Tin (Sn)
	*	This package is Pb-free. The Pb-free JEDEC designator ((e3)) can be found on the outer packaging for this package.

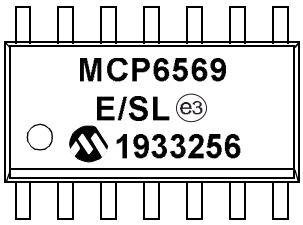
Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

Package Marking Information (Continued)

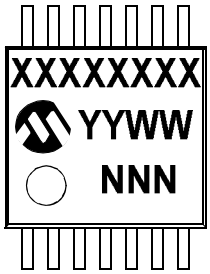
14-Lead SOIC (150 mil) **(MCP6569)**



Example:



14-Lead TSSOP **(MCP6569)**



Example:

APPENDIX A: REVISION HISTORY

Revision G (March 2020)

The following is the list of modifications:

1. Updated package drawings for the 5-Lead SC70 and 14-lead TSSOP packages in **Section 6.0 "Packaging Information"**.

Revision F (August 2019)

The following is the list of modifications:

1. Updated **Section 6.0 "Packaging Information"**.

Revision E (September 2014)

The following is the list of modifications:

1. Added SPICE Macro Model in the Related Device features section.
2. Updated **Temperature Specifications** table.
3. Corrected pin table in **Section 3.0 "Pin Descriptions"**.
4. Added new **Section 5.4, SPICE Macro Model.**

Revision D (February 2013)

The following is the list of modifications:

1. Added the Analog Input (V_{IN}) parameter in **Section 1.0 "Electrical Characteristics"**.

Revision C (February 2011)

The following is the list of modifications:

1. Replaced the MCP5468 package name with the correct MCP6567 package name on page 1 and in Table 3-1.

Revision B (August 2009)

The following is the list of modifications:

1. Added MCP6566U throughout the document.
2. Updated package outline drawings.

Revision A (March 2009)

- Original Release of this Document.

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO.	–	X	/XX
Device		Temperature Range	Package

Device:	MCP6566T:	Single Comparator (Tape and Reel) (SC70, SOT-23)
	MCP6566RT:	Single Comparator (Tape and Reel) (SOT-23 only)
	MCP6566UT:	Single Comparator (Tape and Reel) (SOT-23 only)
	MCP6567:	Dual Comparator
	MCP6567T:	Dual Comparator (Tape and Reel)
	MCP6569:	Quad Comparator
	MCP6569T:	Quad Comparator (Tape and Reel)
Temperature Range:	E =	-40°C to +125°C
Package:	LT =	Plastic Small Outline Transistor (SC70), 5-Lead
	OT =	Plastic Small Outline Transistor (SOT-23), 5-Lead
	MS =	Plastic Micro Small Outline Transistor, 8-Lead
	SN =	Plastic Small Outline Transistor, 8-Lead
	ST =	Plastic Thin Shrink Small Outline Transistor, 14-Lead
	SL =	Plastic Small Outline Transistor, 14-Lead

Examples:

a)	MCP6566T-E/LT:	Tape and Reel, Extended Temperature, 5-Lead SC70 Package.
b)	MCP6566T-E/OT:	Tape and Reel, Extended Temperature, 5-Lead SOT-23 Package.
a)	MCP6566RT-E/OT:	Tape and Reel, Extended Temperature, 5-Lead SOT-23 Package.
a)	MCP6566UT-E/OT:	Tape and Reel, Extended Temperature, 5-Lead SOT-23 Package.
a)	MCP6567-E/MS:	Extended Temperature, 8-Lead MSOP Package.
b)	MCP6567-E/SN:	Extended Temperature, 8-Lead SOIC Package.
a)	MCP6569T-E/SL:	Tape and Reel, Extended Temperature, 14-Lead SOIC Package.
b)	MCP6569T-E/ST:	Tape and Reel, Extended Temperature, 14-Lead TSSOP Package.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

For information regarding Microchip's Quality Management Systems, please visit www.microchip.com/quality.
