Engineering/Process Change Notice

ECN/PCN No.: R0118

For Manufacturer			
Product Description: ONBOARD 2.4 GHZ SMD – ANTENNA, ONBOARD 2.4 GHZ SMD – EVB	**Abracon Part Number / Part Series:** PRO-OB-440, PRO-EB-450	☒ Documentation only ☒ ECN ☐ EOL	☐ Series ☒ Part Number
Affected Revision: A, I.R.	**New Revision:** B, A	**Application:**	☐ Safety ☒ Non-Safety
Prior to Change: Maximum gain = 5.2			
After Change: Maximum gain = 5.0			
Cause/Reason for Change: Typo of the maximum gain value. Update to documentation only to reflect the actual maximum gain. The lower the maximum gain, the better antenn. Hence, this is an improved specification only. No risks related to this update.			

Change Plan		
Effective Date: 2022-11-04	**Additional Remarks:** N/A	
Change Declaration: No change in FFF. Documentation update to correct for typo of a number.		
Issued Date: 2022-11-04	**Issued By:** *Jonatan Lindahl*	**Issued Department:** Engineering
Approval: *Syed Raza* Engineering VP	**Approval:** *Reuben Quintanilla* Quality Director	**Approval:** *Ying Huang* Purchasing Director

For Abracon EOL only		
Last Time Buy (if applicable):	**Alternate Part Number / Part Series:**	
Additional Approval:	**Additional Approval:**	**Additional Approval:**

Customer Approval (If Applicable)		
Qualification Status: ☐ Approved ☐ Not accepted *Note: It is considered approved if there is no feedback from the customer 1 month after ECN/PCN is released.*

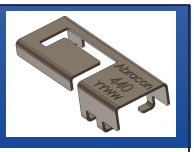
Company Name:	**Company Representative:**	**Representative Signature:**
Customer Remarks:		

OnBoard 2.4 GHz SMD - Antenna



PRO-OB-440

Request Samples | Check Inventory

13.75 x 5.23 x 3.53 mm
RoHS/RoHS II Compliant
MSL Level = 1

Features

- Compact
- Low Cost
- Mixed Linear Polarization
- Peak Gain of less than 5 dBi
- Efficiency > 65%
- Surface Mount
- Durable-Shelf life of up to 10 years

Applications

- 2.4 GHz - Wi-Fi/BT/BLE/ZigBee/ISM
- IoT, M2M
  - Industrial IoT
  - Consumer IoT
  - Medical IoT
- Telemetry
- Wireless Remote Control
- Personal Area Networks (PAN)
- Industrial/Commercial Equipments

PCB layout and antenna pin numbering

The antenna uses PIFA technology and should thus be mounted on a ground plane. If there are several layers in the PCB, there is an advantage to add vias for smooth interconnection of the ground areas to avoid splits in the ground plane. It is also important that there is a ground clearance around the NC pads and the RF feed pad, through all layers of the PCB. It is recommended to implement a matching network to optimize the antenna impedance in your application. The components can be positioned under the antenna. See recommendations in the figures below.

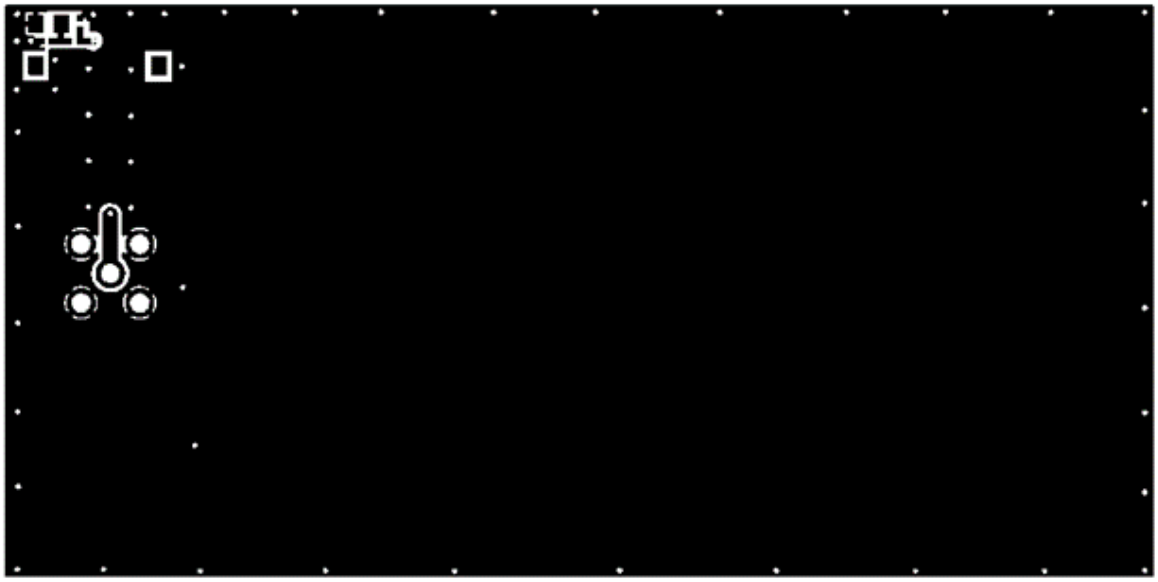
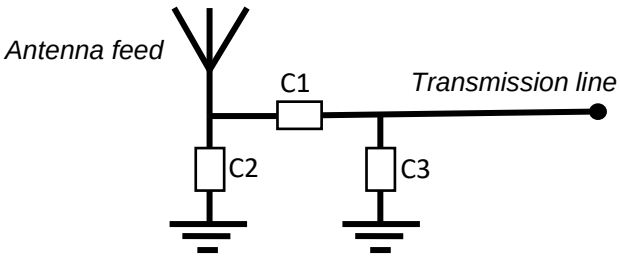
Evaluation Board Outline & Matching Circuit

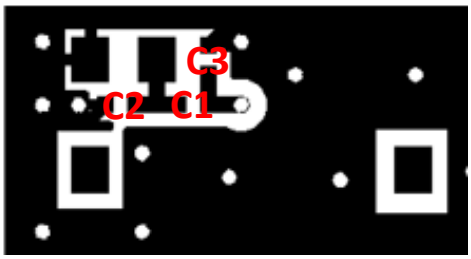
The evaluation board (PRO-EB-450) is developed to simplify antenna testing and evaluation. It has an arbitrary size of 100 x 50 mm and includes an SMA connector. The purpose is to give a reference design for an optimal antenna implementation. The evaluation board can also be used to test other implementations by cutting and soldering the PCB into any device.



Evaluation board outline

The evaluation board has a matching circuit implemented next to the antenna. This is aimed to enable optimization possibilities for the user. The component positions are sized for 0402 (1005 metric) SMD components.





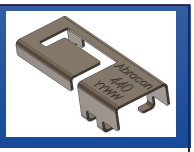
Matching circuit

The antenna needs a matching circuit to adjust the resonant frequency balance. When delivered, the evaluation board is tuned for optimum balance at the 2.4 GHz frequency band using the following (can be replaced by equivalent):

C1 = 1.5 nH (LQW15AN1N5B00D) C2 = 0.5 pF (GRM1555C1HR50WA01D) C3 = N/A

However, it is common that the resonant frequency will shift during implementation in an arbitrary device. Therefore, this matching may be changed with other values/components/brands for compensation of such effects. This is further described in the General Implementation Guidelines section below.

OnBoard 2.4 GHz SMD - Antenna



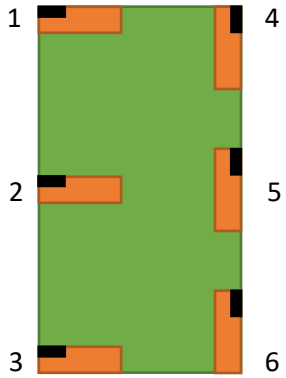
PRO-OB-440

Request Samples | Check Inventory

13.75 x 5.23 x 3.53 mm
RoHS/RoHS II Compliant
MSL Level = 1

General Implementation Guidelines

The antenna can be positioned in different ways, although there are some positions which are more beneficial. Below picture shows a typical PCB with examples on different antenna positions. The optimal position is option 1 or 4.



= *GND pin(s)*

Optimal

1 & 4
3
6
2 & 5

The antenna should be aligned with the PCB edge if possible, preferably with the GND pin(s) close to a corner.

The antenna enables that small electrical components are mounted inside the antenna keep-out block. This is a space-efficient solution which has very little influence on the performance. It may have an impact on the antenna tuning, but is fully possible if there is limited space on the PCB.

Another general aspect on surface mounted antennas is regarding the PCB population. If other electrical components are positioned in the surrounding area of the antenna, some impact on the antenna tuning and radiated performance may be expected. It is recommended that such components are distributed below a topographical slope that starts on PCB level at the antenna keep-out block, and slowly increases the height.

It shall also be highlighted that plastic and metal parts in the near proximity of antennas may influence the antenna tuning and/or performance. This aspect should be noted as a general guideline for all antennas. The effects are difficult to estimate without detailed information, but it is common that a plastic housing above the antenna shifts the resonant frequency down. It is recommended to measure the antenna in the actual device after implementation.

Description

The PRO-EB-450 Evaluation board is designed to provide a means to facilitate engineering evaluation of the OnBoard 2.4 GHz SMD antenna: PRO-OB-440. With a typical operating frequency range of 2.4 ~ 2.5 GHz, the antenna can be used for WiFi/BT/BLE/ZigBee/ISM applications.

To evaluate the performance of antenna, calibrate the Vector Network analyzer (VNA) for the testing frequency band and connect the evaluation board to the calibrated port using the given SMA connector on the board.
