

How to download Development Desktop Software

The Development Desktop software works with the application mother board and all MEMS sensors' shuttle boards. The current release is DD2.0_UI2.3 that supports both Windows 32-bit and 64-bit OS, such as Windows XP, Vista and 7. Customers can download DD2.0_UI2.3 online after registration.

Step 1: Go online at <http://www.bosch-sensortec.com/en/>.

Click "Sign in" button above and a new Window will pop up.

If this is the first time to download software, you need to click "Registration" button above to create a new account. A new Window will pop up as shown below.
