Electromechanical Switch Solutions

Dedicated to providing the highest level of quality, Panasonic manufactures Electromechanical Components that improve a device's overall user experience including a wide variety of Tactile and Detector Switches. Enhancing the Human-To-Machine Interface, Panasonic Switches improve device design by providing that "special touch" along with durability and reliability, no matter what the application. Choose from a wide variety of Panasonic Switch alternatives to improve the overall user experience of any device.

TACTILE SWITCHES

Panasonic's Tactile Switches are versatile and can be used in almost any user interface application. Designed in various shapes, sizes, terminals and push forces, Panasonic's Tactile Switches offer the opportunity to select the perfect Switch for the application. Each Switch is engineered for low contact resistance, small bounce noise, high contact reliability and a sharp tactile feel. Discover how designing in Panasonic Tactile Switches can enhance the Human-To-Machine interface experience.

DETECTOR SWITCHES

Detector Switches are used to “detect” internal mechanical movements and convert human manual operations, such as the closing of a flip-phone or the opening of a door, to electronic signals. In some applications, Detector Switches are used to replace Encoders as a lower cost solution. Panasonic Detector Switches use a mechanical sliding spring design to ensure consistent signal output. They also feature long travel, thin profile, compact size, light weight, highly flexible actuation angles and surface mount or J-bent terminal mounting options.
