Notification Subject:

Data Sheet - AT28HC256 Industrial Grade 256-Kbit (32,768 x 8) High-Speed Parallel EEPROM Document Revision

Affected CPNs:

SYST-05VPBS609_Affected_CPN_01062021.pdf SYST-05VPBS609_Affected_CPN_01062021.csv

Notification Text:

SYST-05VPBS609

Microchip has released a new Product Documents for the AT28HC256 Industrial Grade 256-Kbit (32,768 x 8) High-Speed Parallel EEPROM of devices. If you are using one of these devices please read the document located at AT28HC256 Industrial Grade 256-Kbit (32,768 x 8) High-Speed Parallel EEPROM.

Notification Status: Final

Description of Change:

- 1) Updated to the Microchip template.
- 2) Microchip DS20006428 replaces Atmel document 0007
- 3) Added updated Part Markings to include new trace code format.

Impacts to Data Sheet: None

Reason for Change: To Improve Manufacturability **Change Implementation Status:** Complete

Date Document Changes Effective: 06 Jan 2020

NOTE: Please be advised that this is a change to the document only the product has not been changed.

Markings to Distinguish Revised from Unrevised Devices: N/A

Attachments:

AT28HC256 Industrial Grade 256-Kbit (32,768 x 8) High-Speed Parallel EEPROM

Please contact your local Microchip sales office with questions or concerns regarding this notification.

Terms and Conditions:

If you wish to <u>receive Microchip PCNs via email</u> please register for our PCN email service at our <u>PCN</u> home page select register then fill in the required fields. You will find instructions about registering for Microchips PCN email service in the <u>PCN FAQ</u> section.

If you wish to <u>change your PCN profile</u>, <u>including opt out</u>, please go to the <u>PCN home page</u> select login and sign into your myMicrochip account. Select a profile option from the left navigation bar and make the applicable selections.

256-Kbit (32,768 x 8) Industrial High-Speed Parallel EEPROM

Features

- · Fast Read Access Time: 70 ns
- · Automatic Page Write Operation:
 - Internal address and data latches for 64 bytes
 - Internal control timer
- · Fast Write Cycle Time:
 - Page Write cycle time: 3 ms or 10 ms maximum
 - 1 to 64-byte Page Write operation
- · Low-Power Dissipation:
 - 80 mA active current
 - 3 mA standby current
- · Hardware and Software Data Protection
- DATA Polling for End of Write Detection
- · High Reliability CMOS Technology:
 - Endurance: 10,000 or 100,000 cycles
 - Data retention: 10 years
- Single 5V ± 10% Supply
- · CMOS and TTL Compatible Inputs and Outputs
- JEDEC[®] Approved Byte-Wide Pinout
- Industrial Temperature Range
- · Green (Pb/Halide-free) Packaging Option

Packages

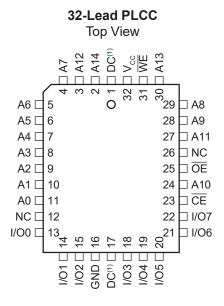

• 32-Lead PLCC, 28-Lead SOIC and 28-Lead TSOP

3. Description

The AT28HC256 is a high-performance Electrically Erasable and Programmable Read-Only Memory (EEPROM). Its 256-Kb memory is organized as 32,768 words by 8 bits. Manufactured with Microchip's advanced nonvolatile CMOS technology, the device offers access times to 70 ns with power dissipation of just 440 mW. When the device is deselected, the standby current is less than 3 mA.

The AT28HC256 is accessed like a Static RAM for the read or write cycle without the need for external components. The device contains a 64-byte page register to allow writing of up to 64 bytes simultaneously. During a write cycle, the address and 1 to 64 bytes of data are internally latched, freeing the address and data bus for other operations. Following the initiation of a write cycle, the device will automatically write the latched data using an internal control timer. The end of a write cycle can be detected by \overline{DATA} Polling of I/O7. Once the end of a write cycle has been detected, a new access for a read or write can begin.

The AT28HC256 has additional features to ensure high quality and manufacturability. The device utilizes internal error correction for extended endurance and improved data retention characteristics. An optional software data protection mechanism is available to guard against inadvertent writes. The device also includes an extra 64 bytes of EEPROM for device identification or tracking.

3.1 Block Diagram

4. Electrical Characteristics

4.1 Absolute Maximum Ratings

Temperature under bias $-55^{\circ}\text{C to } +125^{\circ}\text{C}$ Storage temperature $-65^{\circ}\text{C to } +150^{\circ}\text{C}$ All input voltages (including NC pins) with respect to ground -0.6V to +6.25V All output voltages with respect to ground $-0.6\text{V to } \text{V}_{\text{CC}} + 0.6\text{V}$ Voltage on $\overline{\text{OE}}$ and A9 with respect to ground -0.6V to +13.5V

Note: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

4.2 DC and AC Operating Range

Table 4-1. DC and AC Operating Range

		AT28HC256-70	AT28HC256-90	AT28HC256-12
Operating Temperature (Case)	Industrial	-40°C to +85°C	-40°C to +85°C	-40°C to +85°C
V _{CC} Power Supply		5V ± 10%	5V ± 10%	5V ± 10%

4.3 DC Characteristics

Table 4-2. DC Characteristics

Parameter	Symbol	Minimum	Maximum	Units	Test Conditions
Input Load Current	ILI	_	10	μΑ	V_{IN} = 0V to V_{CC} + 1V
Output Leakage Current	ILO	_	10	μΑ	$V_{I/O} = 0V \text{ to } V_{CC}$
V _{CC} Standby Current TTL	I _{SB1}	_	3	mA	CE = 2.0V to V _{CC} for AT28HC256-90, -12
		_	60	mA	CE = 2.0V to V _{CC} for AT28HC256-70
V _{CC} Standby Current CMOS	I _{SB2}	_	300	μA	$\overline{\text{CE}}$ = V _{CC} - 0.3V to V _{CC} for AT28HC256-90, -12
V _{CC} Active Current	I _{CC}	_	80	mA	f = 5 MHz; I _{OUT} = 0 mA
Input Low Voltage	V_{IL}	_	0.8	V	
Input High Voltage	V _{IH}	2.0	_	V	
Output Low Voltage	V _{OL}	_	0.45	V	I _{OL} = 6.0 mA
Output High Voltage	V _{OH}	2.4	_	V	I _{OH} = -4 mA

4.4 Pin Capacitance

Table 4-3. Pin Capacitance^(1,2)

Symbol	Typical	Maximum	Units	Conditions
C _{IN}	4	6	pF	V _{IN} = 0V
C _{OUT}	8	12	pF	V _{OUT} = 0V

- 1. This parameter is characterized but is not 100% tested in production.
- 2. $f = 1 \text{ MHz}, T_A = 25^{\circ}\text{C}$

6. Device Operation

READ: The AT28HC256 is accessed like a Static RAM. When \overline{CE} and \overline{OE} are low and \overline{WE} is high, the data stored at the memory location determined by the address pins is asserted on the outputs. The outputs are put in the high-impedance state when either \overline{CE} or \overline{OE} is high. This dual-line control gives designers flexibility in preventing bus contention in their system.

BYTE WRITE: A low pulse on the $\overline{\text{WE}}$ or $\overline{\text{CE}}$ input with $\overline{\text{CE}}$ or $\overline{\text{WE}}$ low (respectively) and $\overline{\text{OE}}$ high initiates a write cycle. The address is latched on the falling edge of $\overline{\text{CE}}$ or $\overline{\text{WE}}$, whichever occurs last. The data is latched by the first rising edge of $\overline{\text{CE}}$ or $\overline{\text{WE}}$. Once a byte write is started, it will automatically time itself to completion. Once a programming operation is initiated and for the duration of t_{WC} , a read operation will effectively be a polling operation.

PAGE WRITE: The page write operation of the AT28HC256 allows 1 to 64 bytes of data to be written into the device during a single internal programming period. A page write operation is initiated in the same manner as a byte write; the first byte written can then be followed by 1 to 63 additional bytes. Each successive byte must be written within 150 μ s (t_{BLC}) of the previous byte. If the t_{BLC} limit is exceeded, the AT28HC256 will cease accepting data and commence the internal programming operation. All bytes during a page write operation must reside on the same page as defined by the state of the A6-A14 inputs. For each \overline{WE} high-to-low transition during the page write operation, A6-A14 must be the same. The A0 to A5 inputs are used to specify which bytes within the page are to be written. The bytes may be loaded in any order and may be altered within the same load period. Only bytes which are specified for writing will be written; unnecessary cycling of other bytes within the page does not occur.

DATA POLLING: The AT28HC256 features DATA Polling to indicate the end of a write cycle. During a byte or page write cycle, an attempted read of the last byte written will result in the complement of the written data to be presented on I/O7. Once the write cycle has been completed, true data is valid on all outputs and the next write cycle may begin. DATA Polling may begin at any time during the write cycle.

TOGGLE BIT: In addition to DATA Polling, the AT28HC256 provides another method for determining the end of a write cycle. During the write operation, successive attempts to read data from the device will result in I/O6 toggling between one and zero. Once the write is completed, I/O6 will stop toggling and valid data will be read. Testing the toggle bit may begin at any time during the write cycle.

DATA PROTECTION: If precautions are not taken, inadvertent writes to any 5-volt-only nonvolatile memory may occur during transitions of the host system power supply. Microchip incorporated both hardware and software features that will protect the memory against inadvertent writes.

HARDWARE PROTECTION: Hardware features protect against inadvertent writes to the AT28HC256 in the following ways:

- V_{CC} sense if V_{CC} is below 3.8V (typical), the write function is inhibited
- V_{CC} power-on delay once V_{CC} reached 3.8V, the device will automatically time out 5 ms (typical) before allowing a write
- Write inhibit holding any one of OE low, CE high or WE high inhibits write cycles
- Noise filter pulses of less than 15 ns (typical) on the WE or CE inputs will not initiate a write cycle

SOFTWARE DATA PROTECTION: A software-controlled data protection feature was implemented on the AT28HC256. When enabled, the software data protection (SDP) will prevent inadvertent writes. The SDP feature may be enabled or disabled by the user; the AT28HC256 is shipped with SDP disabled.

SDP is enabled by the host system issuing a series of three write commands; three specific bytes of data are written to three specific addresses (refer to Software Data Protection Algorithm). After writing the 3-byte command sequence and after t_{WC}, the entire AT28HC256 will be protected against inadvertent write operations. It should be noted that, once protected, the host may still perform a byte or page write to the AT28HC256. This is done by preceding the data to be written by the same 3-byte command sequence used to enable SDP.

Once set, SDP will remain active unless the disable command sequence is issued. Power transitions do not disable SDP and SDP will protect the AT28HC256 during power-up and power-down conditions. All command sequences must conform to the page write timing specifications. The data in the enable and disable command sequences is not written to the device and the memory addresses used in the sequence may be written with data in either a byte or page write operation.

After setting SDP, any attempt to write to the device without the 3-byte command sequence will start the internal write timers. No data will be written to the device. However, for the duration of t_{WC} , read operations will effectively be polling operations.

DEVICE IDENTIFICATION: An extra 64 bytes of EEPROM memory are available to the user for device identification. By raising A9 to $12V \pm 0.5V$ and using address locations 7FC0H to 7FFFH, the bytes may be written to or read from in the same manner as the regular memory array.

OPTIONAL CHIP ERASE MODE: The entire device can be erased using a 6-byte software code. See Software Chip Erase application note for details.

6.1 Operating Modes

Table 6-1. Operating Modes

Mode	CE	ŌĒ	WE	I/O
Read	V _{IL}	V_{IL}	V _{IH}	D _{OUT}
Write ⁽¹⁾	V _{IL}	V _{IH}	V _{IL}	D _{IN}
Standby/Write Inhibit	V _{IH}	X ⁽²⁾	X	High-Z
Write Inhibit	X	X	V _{IH}	
Write Inhibit	X	V _{IL}	X	
Output Disable	X	V _{IH}	X	High-Z
Chip Erase	V _{IL}	VH(3)	V _{IL}	High-Z

Notes:

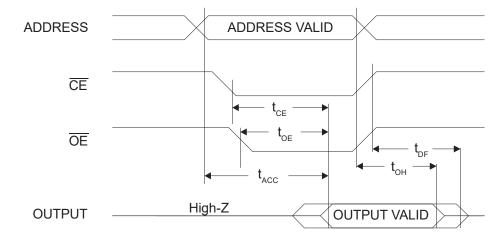

- 1. Refer to AC Programming Waveforms.
- 2. X can be V_{IL} or V_{H} .
- 3. $V_H = 12.0 V \pm 0.5 V$

6.2 AC Read Characteristics

Table 6-2. AC Read Characteristics

Parameter	Symbol	AT28HC256-70		AT28HC256-90		AT28HC256-12		Units
		Min.	Max.	Min.	Max.	Min.	Max.	
Address to Output Delay	t _{ACC}	_	70	<u> </u>	90	_	120	ns
CE to Output Delay	t _{CE} ⁽¹⁾	_	70	<u> </u>	90	<u> </u>	120	ns
OE to Output Delay	t _{OE} ⁽²⁾	0	35	0	40	0	50	ns
CE or OE to Output Float	t DF ^(3,4)	0	35	0	40	0	50	ns
Output Hold from OE, CE or Address, whichever occurred first	t _{OH}	0	_	0	_	0	_	ns

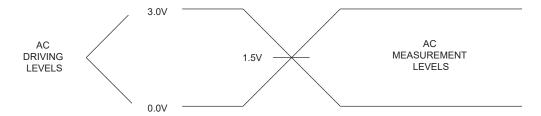

6.3 AC Read Waveforms^(1,2,3,4)

Notes:

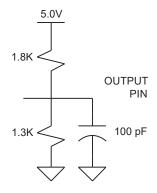

- 1. $\overline{\text{CE}}$ may be delayed up to t_{ACC} - t_{CE} after the address transition without impact on t_{ACC} .
- 2. $\overline{\text{OE}}$ may be delayed up to t_{CE} - t_{OE} after the falling edge of $\overline{\text{CE}}$ without impact on t_{CE} or by t_{ACC} - t_{OE} after an address change without impact in t_{ACC} .
- 3. t_{DF} is specified from \overline{OE} or \overline{CE} , whichever occurs first ($C_L = 5 \text{ pF}$).
- 4. This parameter is characterized and is not 100% tested.

6.4 Input Test Waveforms and Measurement Level

Note: $t_{\mathbb{R}}$, $t_{\mathbb{F}} < 5$ ns.

6.5 Output Test Load

6.6 AC Write Characteristics

Table 6-3. AC Write Characteristics

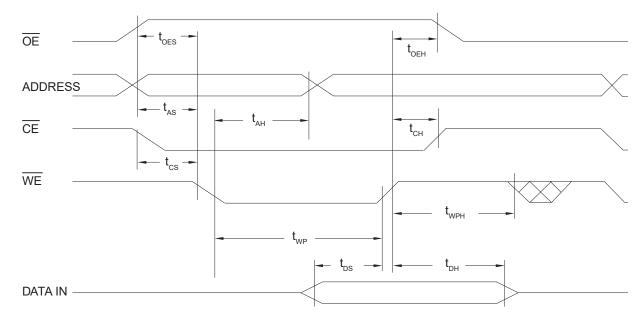

Parameter	Symbol	Minimum	Maximum	Units
Address, OE Setup Time	t _{AS} , t _{OES}	0	<u> </u>	ns
Address Hold Time	t _{AH}	50	_	ns
Chip Select Setup Time	t _{CS}	0	_	ns
Chip Select Hold Time	t _{CH}	0	_	ns
Write Pulse Width (WE or CE)	t _{WP}	100	<u> </u>	ns
Data Setup Time	t _{DS}	50	_	ns
Data, OE Hold Time	t _{DH} , t _{OEH}	0	_	ns
Time to Data Valid	t _{DV}	NR ⁽¹⁾	_	

Note:

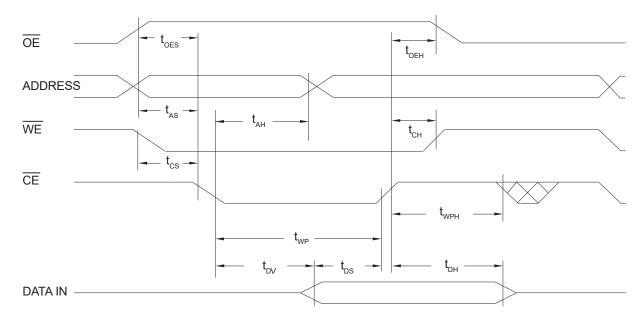

1. NR = No Restriction

6.7 AC Write Waveforms

6.7.1 WE Controlled

6.7.2 **CE** Controlled

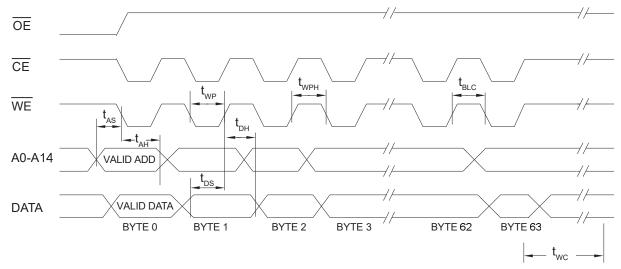

6.8 Page Mode Characteristics

Table 6-4. Page Mode Write Characteristics

Parameter	Symbol	Minimum	Maximum	Units	
Write Cycle Time (option available)	AT28HC256	4	_	10	ms
	AT28HC256F	t wc	_	3	ms
Address Setup Time		t _{AS}	0	_	ns
Address Hold Time		t _{AH}	50	_	ns
Data Setup Time		t _{DS}	50	_	ns
Data Hold Time		t _{DH}	0	_	ns
Write Pulse Width		t _{WP}	100	_	ns
Byte Load Cycle Time		t _{BLC}	_	150	μs
Write Pulse Width High		t _{WPH}	50	_	ns

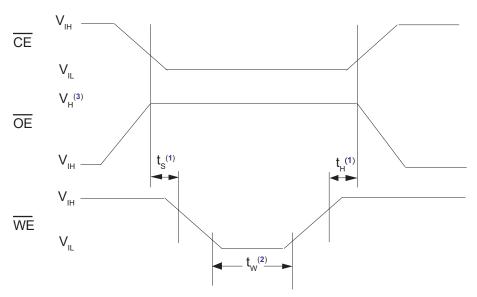

6.9 Page Mode Write Waveforms^(1,2)

Notes:

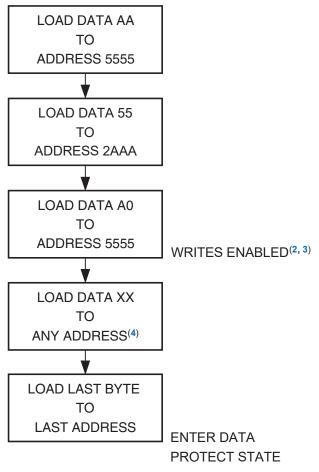

- 1. A6 through A14 must specify the same page address during each high-to-low transition of WE (or CE).
- 2. \overline{OE} must be high only when \overline{WE} and \overline{CE} are both low.

6.10 Chip Erase Waveforms

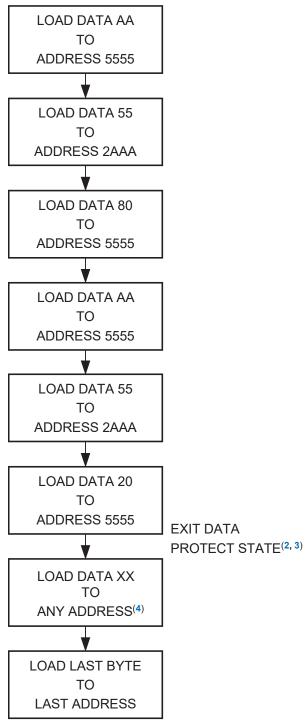

- 1. $t_S = t_H = 5 \mu sec (minimum)$
- 2. $t_W = 10 \text{ msec (minimum)}$
- 3. $V_H = 12.0V \pm 0.5V$

6.11 Software Data Protection Enable Algorithm⁽¹⁾

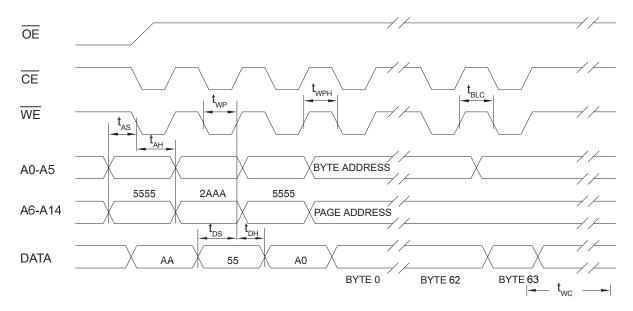

- 1. Data format: I/O7-I/O0 (Hex); Address format: A14-A0 (Hex).
- 2. Write-Protect state will be activated at end of write even if no other data is loaded.
- 3. Write-Protect state will be deactivated at end of write period even if no other data is loaded.
- 4. 1 to 64 bytes of data are loaded.

6.12 Software Data Protection Disable Algorithm⁽¹⁾

- 1. Data format: I/O7-I/O0 (Hex); Address format: A14-A0 (Hex).
- 2. Write-Protect state will be deactivated at end of write period even if no other data is loaded.
- 3. Write-Protect state will be deactivated at end of write period even if no other data is loaded.
- 4. 1 to 64 bytes of data are loaded.

6.13 Software Protected Program Cycle Waveform^(1,2)

Notes:

- 1. A6-A14 must specify the same page address during each high-to-low transition of WE (or CE) after the software code has been entered.
- 2. \overline{OE} must be high only when \overline{WE} and \overline{CE} are both low.

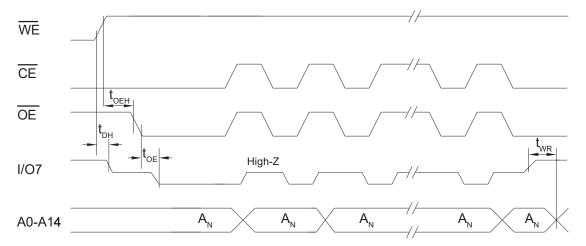

6.14 Data Polling Characteristics⁽¹⁾

Table 6-5. Data Polling Characteristics

Parameter	Symbol	Minimum	Typical	Maximum	Units
Data Hold Time	t _{DH}	0	_	_	ns
OE Hold Time	t _{OEH}	0	_	_	ns
OE to Output Delay ⁽²⁾	t _{OE}	_	_	_	ns
Write Recovery Time	t _{WR}	0	_	_	ns

- 1. These parameters are characterized and not 100% tested.
- 2. See AC Read Characteristics.

6.15 Data Polling Waveforms

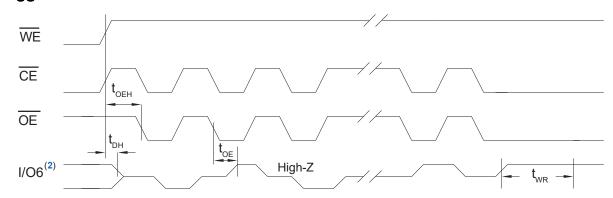

6.16 Toggle Bit Characteristics⁽¹⁾

Table 6-6. Toggle Bit Characteristics

Parameter	Symbol	Minimum	Typical	Maximum	Units
Data Hold Time	t _{DH}	10	_	_	ns
OE Hold Time	t _{OEH}	10	_	_	ns
OE to Output Delay ⁽²⁾	t _{OE}	_	_	_	ns
OE High Pulse ⁽²⁾	t _{OEHP}	150	_	_	ns
Write Recovery Time	t _{WR}	0	_	_	ns

- 1. These parameters are characterized and not 100% tested.
- 2. See AC Read Characteristics.

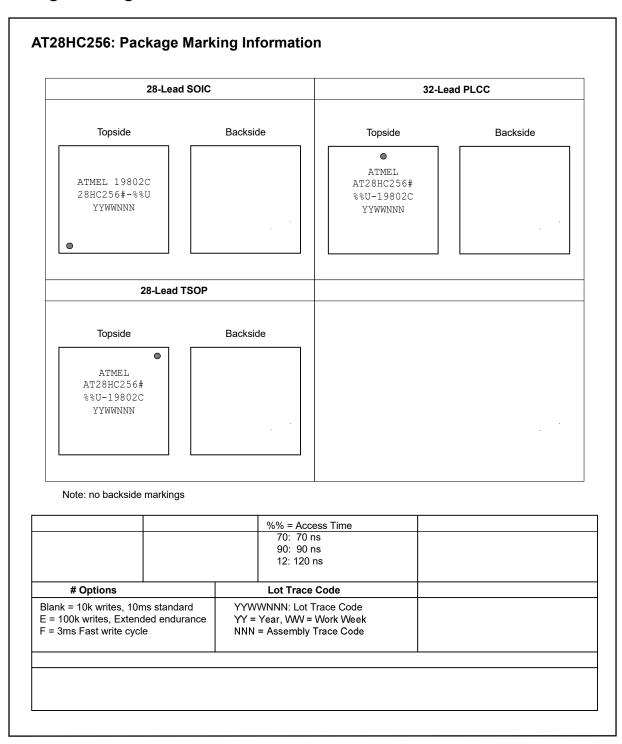

6.17 Toggle Bit Waveforms

- 1. Toggling either \overline{OE} or \overline{CE} or both \overline{OE} and \overline{CE} will operate toggle bit.
- 2. Beginning and ending state of I/O6 will vary.
- 3. Any address location may be used but the address should not vary.

- 5. Datums A & B to be determined at Datum H.

Microchip Technology Drawing C04-052C Sheet 2 of 2

28-Lead Plastic Small Outline (SO) - Wide, 7.50 mm Body [SOIC]

For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging

RECOMMENDED LAND PATTERN

	MILLIMETERS			
Dimension	MIN	NOM	MAX	
Contact Pltch		1.27 BSC		
Contact Pad Spacing	С		9.40	
Contact Pad Width (X28)	Х			0.60
Contact Pad Length (X28)	Υ			2.00
Distance Between Pads	Gx	0.67		
Distance Between Pads	G	7.40		

Notes:

1. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing No. C04-2052A

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging.

8. Revision History

Revision A (October 2020)

Updated to the Microchip template. Microchip DS20006428 replaces Atmel document 0007. Added updated Part Markings to include new trace code format.

The Microchip Website

Microchip provides online support via our website at www.microchip.com/. This website is used to make files and information easily available to customers. Some of the content available includes:

- Product Support Data sheets and errata, application notes and sample programs, design resources, user's
 quides and hardware support documents, latest software releases and archived software
- General Technical Support Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- Business of Microchip Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to www.microchip.com/pcn and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

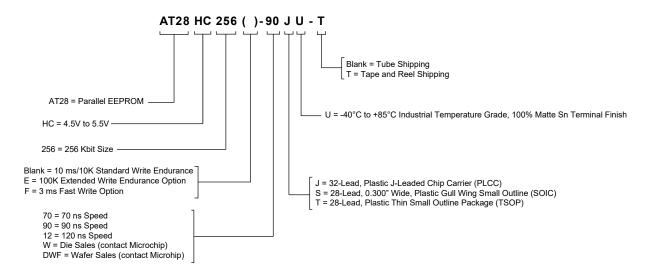

- Distributor or Representative
- · Local Sales Office
- · Embedded Solutions Engineer (ESE)
- · Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: www.microchip.com/support

Product Identification System

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

Package Types						
J	32-Lead, Plastic J-leaded Chip Carrier (PLCC)					
S	28-Lead, 0.300" Wide, Plastic Gull Wing Small Outline (SOIC)					
Т	28-Lead, Plastic Thin Small Outline Package (TSOP)					
W	Diced Die in Waffle Tray					
DWF	Die in Wafer Form Shipped in 6-inch Round Jars					
	Options					
Blank	Standard Device: Endurance = 10K Write Cycles; Write Time 10 ms					
Е	High Endurance Option: Endurance = 100K Write Cycles					
F	Fast Write Option: Write Time = 3 ms					

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods being used in attempts to breach the code protection features
 of the Microchip devices. We believe that these methods require using the Microchip products in a manner
 outside the operating specifications contained in Microchip's Data Sheets. Attempts to breach these code
 protection features, most likely, cannot be accomplished without violating Microchip's intellectual property rights.
- · Microchip is willing to work with any customer who is concerned about the integrity of its code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code
 protection does not mean that we are guaranteeing the product is "unbreakable." Code protection is constantly
 evolving. We at Microchip are committed to continuously improving the code protection features of our products.
 Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act.
 If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue
 for relief under that Act.

Legal Notice

Information contained in this publication is provided for the sole purpose of designing with and using Microchip products. Information regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications.

THIS INFORMATION IS PROVIDED BY MICROCHIP "AS IS". MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL OR CONSEQUENTIAL LOSS, DAMAGE, COST OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Trademarks

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, chipKIT, chipKIT logo, CryptoMemory, CryptoRF, dsPIC, FlashFlex, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Kleer, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PackeTime, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AgileSwitch, APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, FlashTec, Hyper Speed Control, HyperLight Load, IntelliMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet-Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, Anyln, AnyOut, Augmented Switching, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, Espresso T1S, EtherGREEN, IdealBridge, In-Circuit Serial Programming, ICSP, INICnet, Intelligent Paralleling, Inter-Chip Connectivity, JitterBlocker, maxCrypto, maxView, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach,

Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, RTAX, RTG4, SAM-ICE, Serial Quad I/O, simpleMAP, SimpliPHY, SmartBuffer, SMART-I.S., storClad, SQI, SuperSwitcher, SuperSwitcher II, Switchtec, SynchroPHY, Total Endurance, TSHARC, USBCheck, VariSense, VectorBlox, VeriPHY, ViewSpan, WiperLock, XpressConnect, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, and Symmcom are registered trademarks of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.
