Business Continuity Customer Notification

Fire incident at manufacturing partner in Wuxi (China)

Status of 28 February 2023 (Update #3)

Dear valued customer,

On 6 January 2023, a fire incident took place at the production site of one of our manufacturing partners in Wuxi (China). Its plating lines that support our Infineon site in Wuxi were severely damaged by the fire. These circumstances are beyond our reasonable control. We are in close exchange with the affected manufacturing partner in Wuxi. The supplier will however not be able to provide services to Infineon until further notice.

Our dedicated team immediately activated short- and mid-term mitigation plans, which include production shifts of affected technologies at our manufacturing site in Wuxi to other sites within our global production network and capacity shifts to minimize impact on our supply capability. As a result, we were able to resume production in CW6 with limited capacity and will continue to ramp up our capacities to pre-incident levels through end of May.

Affected customers have been informed individually through the established channels and delivery plans have been updated accordingly.

We apologize for any inconvenience as a result of this incident. In case of any questions, please feel free to contact us.
